

AURA

Symbols of Being

EARLY-STAGE WEB3 PROJECT BRIEF

We have an idea. We're building it.

AURA is an early-stage Web3 project exploring digital identity, NFTs, token economics and community.

01 - WHAT EXISTS TODAY

- Public AURA website and GitHub repository.
- AURA #001 - ORIGIN and AURA #002 - FORCE on Ethereum.
- ERC-1155 contract: 0xb4a9d1ca2ae56e7491f83cb2b7a4c956fa994593
- Public proof through OpenSea and Etherscan.
- Early wallet connection and read-only verification foundation.

02 - WHAT IS BEING BUILT

- Digital identity and wallet-linked experiences.
- Web3 product infrastructure and user flows.
- NFT utility and ecosystem design.
- Token utility, economics and governance research.
- Developer collaboration and product expansion.
- Community and partner relationships.

03 - CURRENT STATUS

Website: Building / public

NFT layer: Live

Ethereum proof: Live / verifiable

Identity: Foundation / optional database

Token: Research - not issued

Additional smart contracts: Not deployed

Community: Forming

04 - FOR DEVELOPERS

The public GitHub repository is the starting point for technical review.

Local start: npm install, then npm start.

Optional PostgreSQL and Ethereum RPC add private infrastructure capabilities.

05 - FOR INVESTORS AND PARTNERS

AURA is seeking people who can evaluate the concept, contribute expertise, help build the product, provide network access, or consider future capital.

The project does not claim unverified traction, revenue, funding, users, or returns.

This brief describes the current project state and direction.
